

# FFT 3010 & 3030 EMI TEST RECEIVERS

arj

9KHZ-30MHZ

Fully FFT digital EMI Receivers for measurement of conducted electromagnetic interference from 9kHz to 300MHz

Compact designed and manufactured compliant to CISPR 16 International Standard, using FFT Scan Mode for fast measurements of conducted electromagnetic interference in accordance with requirements of EMI International, European and Product standards, pre-selectors and advanced software for EMC testing.

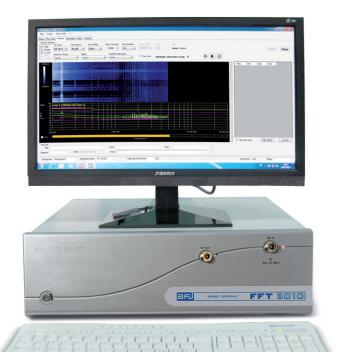

A Max 127 dBµV

FFT 3010

# **FFT 3010 & 3030** EMI TEST RECEIVERS

Based on a PC integrated architecture with WINDOWS 10 Embedded OS, FFT 3010 & 3030 EMI Receivers are ready to operate with advanced software for EMC testing, fitted with pre-selectors that allow excellent dynamic range and precise conducted emission measurements covering the frequency range from 9kHz to 300MHz. Remote control with an external PC is also possible.

Optimized easy-to-use EMI measurement concept.

Fitted with the internal pre-selector/ preamplifier AFJ FFT 3010 & 3030 units feature an excellent dynamic range and are, therefore, able to perform precise EMC tests.

Measurements to commercial EMI International, European and Product standards, shall be carried out directly by comparing the EMI spectrum with the associated limit lines and switching on the appropriate detectors.

## MAIN FEATURES

- ◆ FFT Scan Mode
- Peak, Quasi-Peak, CISPR Average, RMS and CISPR RMS numerical detectors
- Automatic attenuation insertion in case of saturation condition during measurement sweep
- Precise digital overload detector to avoid saturation effects during analyzing function
- Correct pulse weighting to CISPR 16-1-1 from PRF of 1Hz
- High measurement speed and fast detection of critical frequencies (dwell time down to 1msec)
- High sensitivity
- Large-signal immunity
- Low measurement uncertainty
- High measurement speed
- Correction values for cables loss, attenuator/amplifier, coupling networks, GTEM correction and antenna factors
- Integrated signal generator
- 10MHz External reference frequency
- Software option for AM / FM / WBFM digital demodulations

## **CISPR COMPLIANCE**

FFT 3010 & 3030 EMI Receivers

fully comply with CISPR 16-1-1. The response of Quasi-Peak Detector in terms of both **absolute calibration** and **relative calibration** lays between the tolerances of CISPR 16-1-1.

The pulse weighting conformity meets down to the minimum value of the Pulse Repetition Frequency (PRF) coming from the DUT, of 1Hz.

The FFT Scan Mode is compliant to CISPR 16-3.

Accuracy and reproducibility are key parameters for AFJ FFT 3010 & 3030 EMI Receiver application.

# FFT 3010 & 3030 EMI Receivers

Software enables the operator to set all parameters and set-up FFT 3010 & 3030 EMI Receivers as requested by CISPR 16-1-1 or to tailor it according to his specific needs.

Some examples are:

- Frequency range
- Numerical Detectors upgradable by software
- (Peak, Quasi Peak, CISPR Average, RMS, CISPR RMS and combination of them)
- Limits set by International, European and other Standards
- Dwell measurement time
- Correction factors

#### **TUNABLE PRE-SELECTION FILTERS**

The input bandwidth of the front end is limited by pre-selection filters to reduce the energy at the input stage of the internal tuner to guarantee the wide dynamic range required for quasi-peak detection.

#### **FFT FUNCTION**

Compliant to CISPR 16-3, FFT is applied to the wideband signal with the advantages of Fast Scan Mode.

#### **FILTERS**

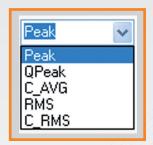

Digital CISPR EMI Filters BW (200Hz, 9kHz and 120kHz) do not need any periodic adjustment and maintenance.

#### **DATA BASE**

Receivers settings, measurements set-up, tests and measurements, frequency tables, external devices correction factors are automatically saved into powerful data base according to the proper work spaces defined by the user.

#### DETECTORS

Due to digital technology, five different types of numerical detectors (upgradable by software) and combinations of them can be selected by the user. In addition to that, each detector type can be associated with a selectable timing, corresponding to the endurance of the measurement aperture gate.

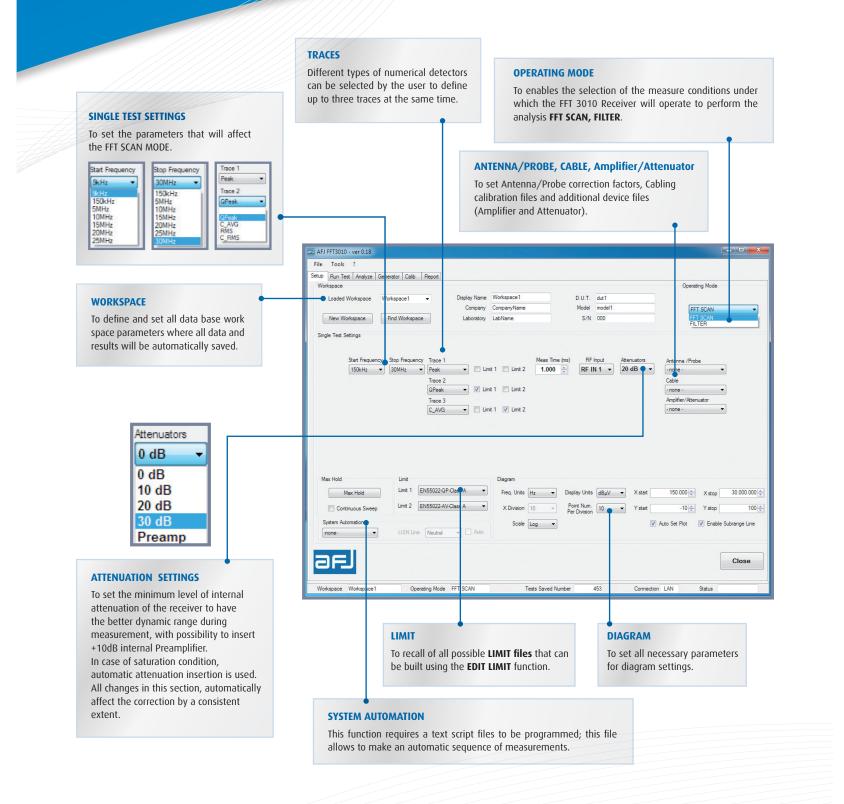

In the Analyze Mode, the bar graph, with current detector value and Max Hold display, shows the results of manual circuit adjustment when DUT cabling is arranged for maximum emission.

### FFT SCAN MODE

Fast Scan Mode with 3009 simultaneous detectors in parallel in Band A and 1669 simultaneous detectors in parallel in Band B increases the measurement speed by a factor 3009 in Band A and 1669 in Band B compared to the measurement speed of the traditional EMI receivers. 211 simultaneous detectors in parallel from 30 MHz to 300 MHz increase the measurement speed by a factor 211 in that frequency range compared to the measurement speed of the traditional EMI receivers.

**FFT 3010 & 3030 EMI Receivers** offer all functions that are required for in-house tests to perform EMC diagnostic measurement as quickly, easily and as accurately as necessary and to document the test results.
